The benefits of XM Radio to me are vital in my day to day life at work and at home. The traffic and weather channels assist me while on the road as a Truck Driver as I travel in multiple states during any given day. The news channels keep me informed to all that is happening around the country and in the world as I am usually out of touch being on the road. I urge the FCC to strongly reject the NAB's petition04-160 and support XM radio as a new and innovative medium which could benefit people like myself. Thank You Darren b. weed
